

Hexagonal cobblestones

The future is built step by step from the strongest foundations in the present.

We offer the widest range of state-of-the-art paving on the market. Our models, colours and finishes combine to provide highly exclusive designs in the most emblematic spaces.

Features

This series includes a set of unconventional geometrically shaped pavings developed by the Industrias del Cemento Aglomerado (ICA) R&D&I department, in conjunction with architects and exterior and urban public space designers. Their most important feature: their geometric shape means they can be laid in various forms. They are used for paving that provides space for grass to grow between the stones.

They come in a wide range of colours and finishes. If you want, we can work with you to develop new formats that adapt to the most exclusive needs and designs.

Family:
Cobblestones

Trademark:
ICA

Production centre:
Sant Andreu de la Barca

Type of packaging:
Pallet 7.73 m²
