

The future is built step by step from the strongest foundations in the present.

We offer the widest range of state-of-the-art paving on the market. Our models, colours and finishes combine to provide highly exclusive designs in the most emblematic spaces.

Features

The Optimax series offers the most complete range of outdoor paving, conceived and designed especially to withstand heavy traffic loads. It is especially suitable for public and private car parks, logistic zones, airports, pavements and crossings in industrial estates and areas with high tangential stress, such as low speed wheel turning.

The concept of this paving is based on maximising the number of faces in contact with parts, to ensure maximum binding and reduce deformities once the paving is in place. It comes in a wide variety of finishes and colours to suit every requirement.
