

Connecta slabs 60x40x7, sharp edge

The future is built step by step from the strongest foundations in the present.

We offer the widest range of state-of-the-art paving on the market. Our models, colours and finishes combine to provide highly exclusive designs in the most emblematic spaces.

Features

Connecta slabs incorporate the latest technologies in the design and manufacture of outdoor paving and the latest advances in production and composition of natural raw materials for creating and improving new urban spaces. Connecta slabs come in the largest number of formats available on the market and in a very wide range of colours and textures: highly wear-resistant finish layers, single layers with mixtures of single colours or specially sandblasted textures, giving spaces a very special character. They also have much better non-slip qualities than other sorts of paving.

Family:
Slabs
