

Top Urban 30x20x10

The future is built step by step from the strongest foundations in the present.

We offer the widest range of state-of-the-art paving on the market. Our models, colours and finishes combine to provide highly exclusive designs in the most emblematic spaces.

Features

The Top Urban series is specially designed to withstand all types of wheeled traffic. Its high resistance properties and broad range of colours and finishes make it the perfect complement to the other sorts of paving in our brand range, to combine and mark out traffic lanes. Suitable for preventing possible defects in paving, in areas with light service vehicle traffic.

The vertical separators facilitate placement and joint filling, which is essential for optimum performance. The most significant advantage is its high resistance to traffic. The slim design represents a new concept in urban paving.
