

Vía Aldana 20.8 x 17.3 x 7

The future is built step by step from the strongest foundations in the present.

We offer the widest range of state-of-the-art paving on the market. Our models, colours and finishes combine to provide highly exclusive designs in the most emblematic spaces.

Features

This combination of different shaped stones with an aged finish and mixed colours is inspired by ancient Roman roads. Both the geometry of the Vía Aldana series and its components are expressly designed to withstand light traffic. They have a high quality composition and non-slip properties, essential in wet conditions.

They are ideal for areas where the aim is to create the warm, homely appearance of rustic paving. Combining different Vía Aldana formats can mark out areas of traffic while fully integrating into the surrounding green areas.
