

Washed artificial aggregate for high-performance bitumen mixes. Ideal for asphalt spraying.

Artificial washed gravel is produced by grinding larger fractions of natural siliceous aggregate from the Zuera gravel pit, which are screened and washed.

3/6 gravel

During the production process, screening provides an even size and washing provides a no-fine grain size, making it ideal for use as gravel in asphalt spraying. Absence of fines mean the aggregate has an excellent cleaning coefficient, thus optimising adherence of the hydrocarbon binder to the aggregate and obtaining a perfect coating.

Family: Artificial aggregates	Trademark: Giral	Production centre: Zuera	Type of packaging: Bulk Big bag
Subfamily: Bitumen mix aggregates
